

Protective gel for the dry and pre-birth period

*High-power protective  
filming gel designed to  
prevent environmental  
agents from penetrating  
the teat canal of the  
quarter during dry and  
pre-birth period.*

## ADVANTAGES

- UP TO 6/7 DAYS OF COVERAGE
- LOW COST PER COW
- WATERPROOF
- HIGH VISIBILITY
- 1 LT. GLOVE TITS X120 TREATED COWS

## GUARANTEED BARRIER

### APPLY BEFORE DRYING OFF THE COWS

Apply with a disposable cup. It dries very quickly forming a very resistant and highly durable elastomeric film, contributing to the reduction of the onset of mastitis.

### HOW TO USE WITH THREE SIMPLE STEPS

- 1 - Check all the quarters, wearing disposable gloves, carefully clean the teats, including the bottom of the nipples.
- 2 - Disinfect the bottom of the nipples and the papillary duct with paper or disposable wet wipes.
- 3 - Using a disposable cup, immerse the last 3/4 cm of the nipple with **GLOVE TITS** gel, wait 1 or 2 min. and then free the animal.
